

## The Tale of Two Alternative Energy Stocks

**Please Note:** We/Our Channel Partners and Affiliate firms have been compensated by the companies portrayed in this document.

We/Our Channel Partners and Affiliates were/are engaged by the firms directly or by the third party shareholders to author and publish Research Reports, in addition to developing and deploying a comprehensive Investor Awareness and Advertisement program.

In this document we are trying to compare and contrast how public policy, government subsidies, tax credits, rebates, government sponsorship of certain industries or certain sub-segment of a same industry could affect the general public sentiment, its affect on the public investor and the banking institutions etc.

Exxon Mobil has provided about \$450 Million Dollars to the Human Genome Pioneer, Dr. Venter, for the discovery and development of Algae to mass produce Oil. Scandinavian countries have developed commercial scale Algae Farms. As for as we know, in the United States there is very little public awareness and Government backing for the Algae to Energy Projects.

Solar Energy on the other hand has been enjoying 'the most favorite' alternative energy status. It has captivated the Administration, Bureaucrats and the Congress alike. Billions of Dollars are being doled out to Solar and Battery Power initiatives.
